

Flexible. Individual. Linerless.

Labelling technology for C and D labelling as well as sleeve solutions.

Nobac 5000 for linerless labels

Maximum flexibility and individuality for your labelling process.

Individual label design
for every kind of packages

L I N E R L E S S Labels without backing paper

Linerless labels are continuously rolled up on a roll. A thin silicon layer on the top of the label prevents them from sticking together. On the bottom side of the labels is an adhesive layer which is activated by heat during application and thus adheres to the package.

The big advantage is, that linerless labels are individually cut during the labelling process. For example, wrap-around labelling as a C or D label is also possible. No matter what type of packaging will be used: Skin packs, MAP trays as well as round products.

Highlights

- C and D labelling of various product geometries
- Maximum label length of up to 500 mm
- Maximum label width of up to 125 mm
- Up to 150 packs / minute
- Full integration with ESPERA weigh-price labellers
- Zero waste due to linerless adhesive

Options

- Available with coder system 53 mm / 106 mm
- 1 or 2 coder systems
- Second applicator optionally to reduce downtime during label roll exchange

One step ahead.
